

**KS2 Science Curriculum – Autumn 2**

**Theme: Animals including humans**  
**Key Question: From eating to excreting what happens in between?**

**What do we already know?**

- Animals can be classified into herbivores, omnivores and carnivores based on their diet
- Foods can be categorised into different groups
- Humans need to eat the right types and amount of food to survive and grow as they cannot make their own food.
- Know the basic parts of the human body and their associated senses

Curriculum objectives	Vocabulary				Curriculum Links
<ol style="list-style-type: none"> <li>1. Identify the different types of teeth in humans and their functions.</li> <li>2. Understand that different animals have different numbers of each type of teeth depending on their diet. Recognise that the teeth help us identify if animals are omnivores, herbivores and carnivores.</li> <li>3. Importance of hygiene on keeping the teeth healthy. Understand the basic structure of the tooth and the effect of different types of food on the enamel.</li> <li>4. Sequence the complete process of digestion and how food travels through the body.</li> <li>5. Understand the function of different parts of the digestive system. Recognise how the nutrients are removed from the food.</li> <li>6. Construct food chains to show how energy can move through living things.</li> </ol>	<b>Key Figures</b>				<b>Potential Misconceptions</b> <ul style="list-style-type: none"> <li>• Arrows in a food chains mean 'eats'</li> <li>• The death of one of the parts of a food chain or web has no, or limited, consequences on the rest of the chain</li> <li>• There is always plenty of food for wild animals</li> <li>• Your stomach is where your belly button is</li> <li>• The food you eat becomes "poo" and the drink becomes "wee"</li> <li>• Food is digested only in the stomach when you have a meal, your food goes down one tube and your drink down another</li> </ul>
	<b>Key Vocabulary</b>				
	<b>Incisors</b>	<i>Incisors are large flat teeth found at the front of human mouths which are used for biting.</i>	<b>Predator</b>	<i>An animal that hunts and eats another animal to eat them for food and, ultimately, energy.</i>	
	<b>Canines</b>	<i>Canines are the sharp pointy teeth which tear and rip apart food when chewing.</i>	<b>Prey</b>	<i>An animal that is hunted by another for food.</i>	
	<b>Premolars</b>	<i>Premolars are flat cusped teeth which are responsible for tearing and grinding food into smaller pieces when chewing.</i>	<b>Producer</b>	<i>A living thing that produces its own food.</i>	
	<b>Molars</b>	<i>Molars are the teeth at the back of your mouth which are used for grinding up food</i>	<b>Digestion</b>	<i>Breakdown of food into other substances that our bodies can use, and any waste removed</i>	
	<b>Omnivores</b>	<i>Omnivores are animals that eat plants, meat, algae, fungi and bacteria</i>	<b>Oesophagus</b>	<i>The tube through which food passes from the mouth to the stomach.</i>	
	<b>Herbivores</b>	<i>Herbivores are animals that only eat plant-based foods.</i>			
	<b>Carnivores</b>	<i>A carnivore is an animal that mostly eats meat.</i>	<b>Stomach</b>	<i>A muscular organ that digests food.</i>	
	<b>Tooth decay</b>	<i>Tooth decay is the breakdown of tooth enamel which can lead to holes in the teeth called cavities.</i>	<b>Large Intestine</b>	<i>A large muscular tube which removes excess water and squeezes waste products to the anus</i>	
<b>Enamel</b>	<i>Outer hard white layer protecting the tooth from wear and tear.</i>	<b>Small Intestine</b>	<i>A muscular tube where digestion takes place and nutrients from the broken down food get absorbed into your body.</i>		

Lesson Sequence	Key Knowledge & Skills
1. Can I recognise different teeth in humans?	<ul style="list-style-type: none"> <li>• Name the different types of teeth which humans have and use observations to help them identify them within their own mouths.</li> <li>• Understand that the number of teeth change as we become adults</li> <li>• Classifying the different teeth and recognising how their differences defines their roles in the mouth.</li> </ul>
2. Can I identify different carnivores, herbivores and omnivores?	<ul style="list-style-type: none"> <li>• Classifying animals according to their diet</li> <li>• Observe the differences between different animals based on their skulls and teeth.</li> <li>• Comparing the teeth of carnivores and herbivores and suggesting reasons for differences</li> </ul>

3. Can I explain how tooth decay occurs?	<ul style="list-style-type: none"> <li>Investigate the effect of different food types on the enamel of teeth</li> <li>Understand the structure of the tooth and how enamel protects the teeth from decay</li> <li>Recognise how hygiene can help protect the teeth from decay</li> </ul>
4. Can I explain the sequence of digestion in human?	<ul style="list-style-type: none"> <li>Observe how digestion occurs in the human body</li> <li>Sequence the different processes of the digestive system</li> </ul>
5. Can I explain the function of different parts of the body in digestion	<ul style="list-style-type: none"> <li>Recognise the role of each part in the digestive system</li> <li>Label the parts within the human body</li> </ul>
6. Can I construct a food chain?	<ul style="list-style-type: none"> <li>Construct a food chain which shows the flow of energy through a system</li> <li>Classify living things into predators, prey, producers and that they can have more than one role in different chains.</li> </ul>

## Working Scientifically

**Classifying, identifying and grouping** – identifying and classifying teeth into different groups, classifying animals based on their teeth.  
**Comparative and fair testing** – Develop fair tests to investigate the effect of different foods on teeth.

## Themes and links

Scientific Threads	Where these are covered:	Links across the Science curriculum	
<b>Diversity</b>	•	<b>EYFS</b>	<ul style="list-style-type: none"> <li>know similarities and differences in relation to places, objects, materials and living things.</li> <li>Discuss features of their own immediate environment</li> <li>Recognise how environments might vary from one another.</li> <li>Make observations of animals and plants explaining why some things occur and changes</li> </ul>
<b>Health</b>	•	<b>Year 1</b>	<ul style="list-style-type: none"> <li>Identify and name common animals including fish, amphibians, reptiles, birds and mammals.</li> <li>Identify common animals that are carnivores, herbivores and omnivores.</li> </ul>
<b>Environmental Impact</b>	•	<b>Year 2</b>	<ul style="list-style-type: none"> <li>Describe and compare the structure of a variety of common animals</li> <li>Identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense.</li> <li>Animals, including humans, have offspring which grow into adults.</li> <li>Understand the basic needs of animals, including humans, for survival</li> <li>Describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene</li> </ul>
<b>Innovation</b>	•	<b>Year 3</b>	<ul style="list-style-type: none"> <li>Humans, need the right types and amount of nutrition, and that they cannot make their own food.</li> </ul>
<b>Hinterland Knowledge</b>		<b>Year 4</b>	<ul style="list-style-type: none"> <li>Humans and some other animals have skeletons and muscles for support, protection and movement.</li> </ul>
		<b>Year 5</b>	<ul style="list-style-type: none"> <li>The changes as humans develop to old age.</li> <li>Differences in the life cycles of a mammal, an amphibian, an insect and a bird. (Living things and their habitats)</li> </ul>

# Hose Church of England Primary School

*'Respect, Bravery, Success, Pride'*

	<b>Year 6</b>	<ul style="list-style-type: none"><li>• The life process of reproduction in some plants and animals. (Y5 - Living things and their habitats)</li><li>• The main parts of the human circulatory system, and the functions of the heart, blood vessels and blood.</li><li>• Impact of diet, exercise, drugs and lifestyle on the way their bodies function.</li><li>• The ways in which nutrients and water are transported within animals, including humans.</li><li>• Classifying living things into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals. (Y6 - Living things and their habitats)</li><li>• Give reasons for classifying plants and animals based on specific characteristics. (Y6 - Living things and their habitats)</li></ul>
